Collab3D Schema and Client Overview

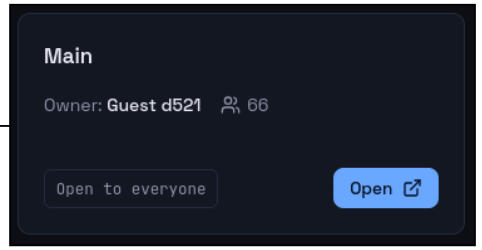

User

Stores global profile details for each participant, including their display name and assigned collaborative color.

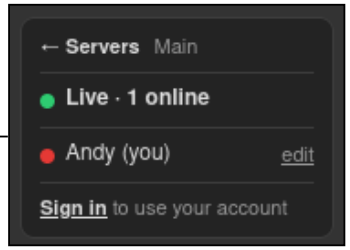

Scene

Manages isolated 3D workspaces, tracking metadata like scene ownership and names

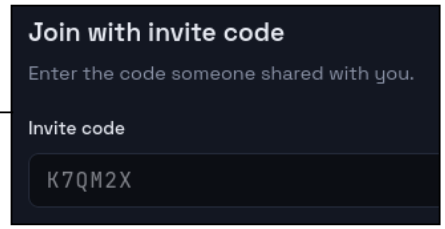

SceneMember

Maps users to specific scenes for multi-server membership and authorization checks

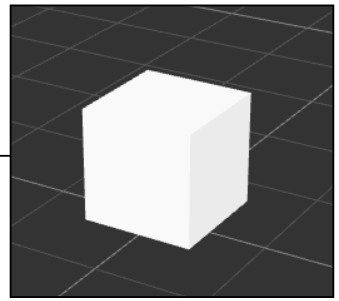

SceneInvite

Handles private server access codes, allowing only members to look up invite keys for closed scenes

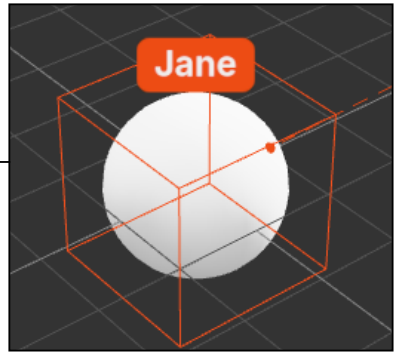

Object

Stores geometry, transform data (position, rotation, scale), color, and real-time locking states to prevent simultaneous edit collisions

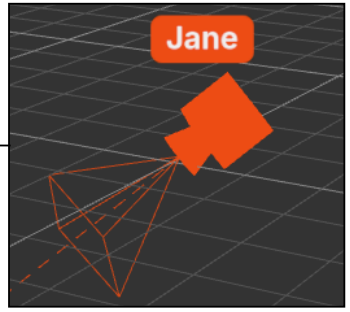

Presence

Tracks real-time user cursor positions within a scene for live spatial awareness

Viewer

Streams live camera positions and orientations so collaborators can see where others are looking in 3D space

LockExpiry

A scheduled table that automatically releases object selection locks if a user disconnects or stops updating
